

It's High Time for Home Theater

There's never been a better time to set up your own home theater. As the highest-quality TVs become more affordable, there's no reason to compromise on picture size and quality. And now, there's no reason to compromise on the theater-quality surround sound that completes the experience. You can have it all. Simply. Beautifully. Immediately. Visit your favorite consumer electronics retailer today, and ask to hear the Altec Lansing surround sound difference.

HOME THEATER SOUND SYSTEMS

Surround Yourself with Sound, Not Wires

WIRELESS THEATER PT8051

Rear Speaker

The PT8051 provides 125 watts of commanding power. You get a beautiful front speaker – housed in a tough, anodized aluminum cabinet – that looks beautiful on any flat surface or mounted on the wall beneath your flat-screen TV. You also get a matching, wireless rear speaker for impressive, room-filling sound as well as surprising flexibility for controlling how the sound is directed.

Front Speaker Configuration

Left

Center

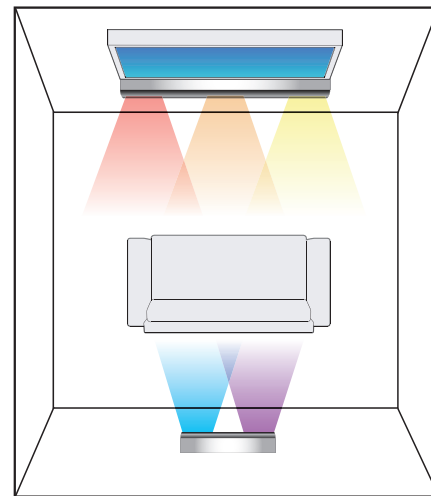

Right

Wall-mounting brackets included

The PT8051 features:

- True 5.1 surround sound from just two speakers, designed to complement any décor
- Wireless rear surround speaker uses proven 2.4 GHz technology
- Easy operation, with one sleek system that replaces cumbersome A/V receivers and multiple speakers
- Flexible placement, perfect for any flat surface or mounted on the wall (brackets included)
- Three 8 x 1 1/2 inch flat-panel drivers in the front speaker and dual 4 x 1 1/2 inch drivers in the rear provide true theater sound quality in two slim-profile, "barely there" cabinets
- Enhanced connectivity, with three digital and three analog inputs to handle all your entertainment sources
- The highest quality construction, with anodized aluminum cabinets for strength, durability and – best of all – good looks that other speakers can't claim

Dimensions
Front Speaker – 40" x 6.75" x 6" (WxDxH)
Rear Speaker – 22" x 6.75" x 6" (WxDxH)

One Speaker = A Roomful of Sound

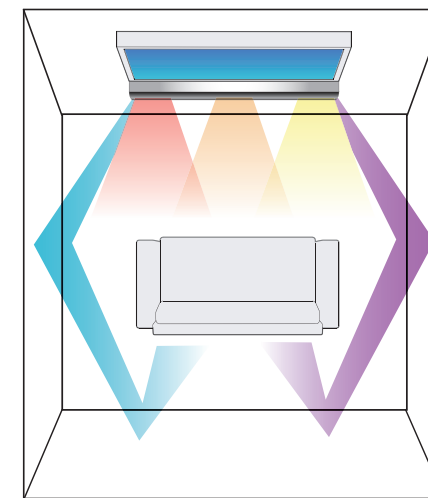

POWERED THEATER PT7031

Nothing could be simpler. Or more impressive. The PT7031 replaces a traditional A/V receiver and separate speakers with one beautiful cabinet that sits on any flat surface or mounts directly to the wall beneath your flat-screen TV. But don't let the simplicity fool you.

This is true Dolby® and DTS® multichannel surround sound – made possible by NXT flat-panel technology that reflects sound from your side walls to the back of the room to completely immerse you in the theater experience.

PT7031 Dimensions
Front Speaker – 40" x 6.75" x 6" (WxDxH)

The PT7031 features:

- True 5.1 surround sound from a single speaker designed to complement any décor
- Easy operation, with one sleek system that replaces cumbersome A/V receivers and multiple speakers
- Flexible placement, perfect for any flat surface or mounted on the wall below your TV (bracket included)
- Three unique flat-panel drivers combine to deliver left, center and right channel information along with surround effects. All mounted in a single, slim-profile cabinet, providing surround sound big enough to match your big-screen TV
- Enhanced connectivity, with three digital and three analog inputs to handle all your entertainment sources
- The highest quality construction, with an anodized aluminum cabinet for strength, durability and – best of all – good looks that you've never seen in a speaker before

Bring Big Time Entertainment Home

Technology and Simplicity, Together at Last

Patented technology delivers true Voice of the Theater sound

Front view detail: Main control panel

Rear view detail: AV connections

With the PT8051 and PT7031, you're the technical director – and you can do it all effortlessly. There's no need to run wires out to satellite or surround speakers. And the amplifier is built-in, so you don't need to hook up a separate receiver. You just plug your DVD player and TV into our speaker system, push *Power*, and settle back for an exhilarating entertainment experience.

So now all you need to do is choose the system that's right for you. With the great looks and sound we build into every Altec Lansing product, that's the only hard part.

Both systems replace a traditional, cumbersome home theater system with its A/V receiver and multiple speakers with a sleek, unobtrusive, easy-to-operate unit that fits perfectly with your big-screen TV, your home décor and your lifestyle.

Experience a Room Filled with Sound, Not Speakers

Our new Voice of the Theatre series speakers are the perfect choice for everyone who wants lush surround sound, but doesn't want six speakers (and wires) cluttering up the room.

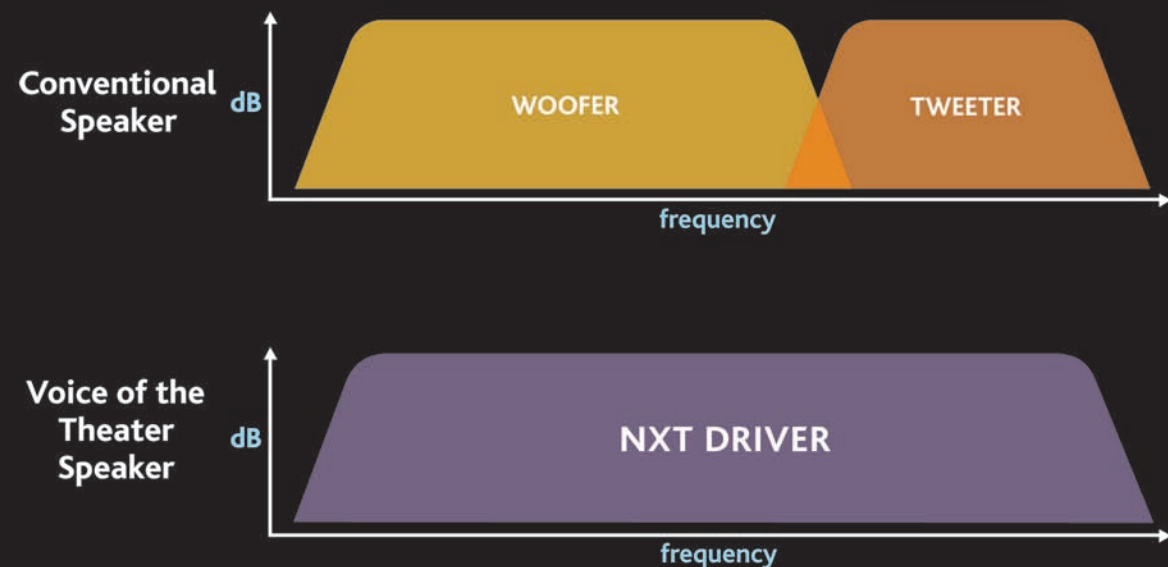

Thanks to a revolutionary flat-panel driver design, the Voice of the Theatre PT7031 offers true Dolby® and DTS® surround sound from your favorite movies and videos – all from just one component that mounts beautifully on the wall below your flat screen, or sits on any flat surface. The Voice of the Theatre PT8051 adds a wireless rear speaker that puts you right in the middle of the action.

High-definition, widescreen TVs are reaching the magic price point where nearly everyone is itching to get one. But there's a catch. In every case you have to wonder: What about sound?

For nearly 80 years, Altec Lansing engineers have been building professional audio systems for theaters, concert halls and production studios. In fact, the original Voice of the Theatre® series speakers were the only commercially available theater speakers approved by the Research Council at the Academy of Motion Picture Arts and Sciences.

Now, we're proud to bring Voice of the Theatre audio quality right into your living room with the PT7031 Powered Theater and the PT8051 Wireless Theater speaker systems. They're the perfect complements to today's high-def TVs.

NXT Digital Technology Frequency Response

The NXT driver's frequency response is much wider than that of a conventional driver. In addition, as this solution does not require the crossover network associated with conventional drivers, there's no degradation to the signal path. The result is natural, unadulterated sound – delivered just as the director intended.

Conventional, cone-shaped drivers push the sound directionally outward from the cone. That means you need several speakers located strategically around the room to provide an optimum surround sound experience. In addition, the cone itself requires a relatively deep cabinet that makes all those speakers hard to locate unobtrusively.

In contrast, the PT7031 and PT8051 use counter-balanced, flat-panel drivers that operate over a wide range of bending modes – the same principle of physics that makes acoustical instruments work. It's called NXT Digital technology, and it allows full-frequency response that is much wider than a conventional driver's – filling the room with clear, super-realistic highs over a full, rich bass. The result is true surround sound ambience with a simple, elegant speaker system that's flat, sleek, understated – simply beautiful.
